Decision Brief — Hire Jeffri Ashari

Head of Financial Crime Compliance (candidate) · FIT=HIGH / HIRE-VERIF=PENDING · prepared 5 November 2026

RECOMMENDATION. Hire — **full-time**, not advisor retainer — conditional on two verifications: independent corroboration of the resume, and referee identity resolution. **The asymmetry:** downside is one salary inside a 7-FTE plan already ratified; upside is the trust apparatus for P3 regulator packaging, warm access to uncontested BNM-orbit segments, and a defensible answer to the only question that kills enterprise sales — *"says who?"*

1. Why Him — The Business Logic

BLUF. ChainSentry sells AML/CFT tooling into rooms where we hold no native credibility, and the product's entire value proposition is **court-grade trust**. Jeffri is the buyer persona we are selling to: a 10-year financial-intelligence practitioner from inside the exact institutional world — BNM-regulated banking, STR filing, takaful, KYC/CDD — that constitutes the addressable market. Hiring him converts the hardest sales problem (*why should a compliance head trust a startup's forensics output?*) into an internal capability. This is not a hire; it is a market-entry asset wearing a payroll number.

#	Pillar	Fact base	Benefit to ChainSentry
1	He IS the buying center	BPMB Manager Fin Intelligence & Integrity; Bank Rakyat AML surveillance; HL MSIG Takaful; CAMCO + ICA (KYC/CDD); 10+ yrs [SELF-REPORTED]	Chairs ChainSentry sells into (FIED STR, AMLATFPUAA 2001, IRA/CRP, board advisory) are chairs he occupied; removes the translator-through-glass sales problem
2	Claims veto on the product's core assertion	Court-grade reports, STR-ready workflow, sanctions corpus integrity = differentiated outputs; JD encodes a claims-VETO pillar	Practitioner kills product claims that would not survive BNM examination or opposing counsel; cheap insurance against the most expensive failure mode (reference-death)
3	Translation engine (bank-native to crypto)	v3 JD 7-row translation table: STR -> crypto-STR playbook; AMLATFPUAA -> evidentiary export; screening -> VA/sanctions coverage	Banks buy 'STR workflow BNM accepts', not 'blockchain analytics'; in-house translator shortens every pitch/demo/POC
4	Unlocks P3 regulator packaging (commercial summit)	AMLA plan: P0 BridgeHold Evidence Pack -> P1 holder-cohort registry -> P2 Explainable-Hold pilot -> P3 regulator packaging (BNM-FIED/SC/CCID, counsel-gated)	P3 requires fluency in exactly what FIED expects from a filer; P0 lighthouse needs compliance framing, not engineering anecdote
5	Warm doors into uncontested segments	Network spans development finance, cooperative banking, takaful, CAMCO/ICA alumni	BNM-orbit institutions with AML obligations and zero crypto-vendor relationships; engineered M-12: pilots + whitepaper + BNM-SC engagement; design partners from his rolodex
6	Regulatory posture for ourselves	Wallet-intelligence monetisation makes us an AML/CFT-adjacent provider	Certified staff strengthen every vendor-DD questionnaire; de-risks own AMLA exposure; answers 'who stands behind this?'

Table 1 — Six-pillar business case. Facts are self-reported pending verification (discipline stated in header).

2. Market Timing — Why Now

KL's crypto-AML buying cluster is hiring **now**. Bybit posted six AML/crypto-risk roles in Greater KL naming Chainalysis, Elliptic, TRM Labs and CipherTrace verbatim — the incumbent stack is being specified in job descriptions, which means displacement windows are observable. TNG Digital posted a department-head Financial Crime Compliance role with **no incumbent tool named** — a 6–12 month purchase window that opens from their hire date. Whoever holds that seat at TNG will speak fluent Jeffri. So should we.

The buying-centre map [INT-20261010-002, HIGH]: AML purchasing authority in the KL cluster sits with compliance departments, not engineering. First Digital = greenfield compliance ops; StraitsX/Monee = institutional scaling pair; Deloitte KL = channel signal. Every one of these conversations is shorter when the person on our side of the table has written the artifacts their side produces.

3. What His Expertise Buys — Sequenced Against the AMLA Plan

Plan stage	Commercial milestone	What Jeffri adds
P0	BridgeHold Evidence Pack (HyperUnit failed-custody case as lighthouse demo)	Compliance framing of a bridge failure — an ML/ATF story, not an engineering anecdote
P1	Holder-cohort registry (user-gated)	Corpus-integrity judgment: what is admissible, what is hygiene
P2	'Explainable-Hold' pilot	Design input on the artifact examiners will actually accept
P3	Regulator packaging — BNM-FIED / SC / CCID (counsel-gated)	Fluency in exactly what FIED expects from a filer; the commercial summit

Table 2 — The four-stage AMLA plan. P3 is unreachable without practitioner-grade compliance fluency; this is the hiring rationale in one row.

4. Engineered Success Metrics (already encoded in the JD)

Day 30	Day 90	Month 12
Trust Requirements Spec (named output)	STR-ready workflow + 3 design partners	pilots + whitepaper + BNM-SC engagement

Success is defined as named product-trust artifacts, not activity. His success mechanically produces the trust apparatus ChainSentry sells on.

5. Conditions, Guardrails and Open Calls

Item	State
HIRE-VERIF	PENDING — fit graded from self-report; external corroboration of resume claims must be rerun before any offer [record INT-20261015-001]
Referee identity	CONFLICT FLAGGED — Muhammad Fadhli (Head of Compliance, ShopeePay|SeaMoney MY) shares a name with MX Global's verified contact fadzli@mxglobal.com.my; employer attribution unresolved — resolve before approach
Guardrails	No current-employer solicitation; no year-1 quota commitments; independence note intact
Owner call 1	FT vs 2-day advisor retainer — open since 15 Oct; recommendation: FT if P3/BNM–SC engagement is on the 12-month horizon (retainer savings evaporate in coordination cost)
Owner call 2	Salary band confirmation — blocks ACT-20261008-002 prong 1 (posting with confirmed grade and band); the ACT is 14 days overdue
Owner call 3	Posting channels — LinkedIn / HRT2U-CareersHub MY / CAMA-ACAMS MY network / Big-4 forensic referral
Screen design	Writing sample + live public-cluster tracing exercise + data-rights clause negotiation instinct — designed, not yet run

Table 3 — Decision dependencies. None are technical; all three open calls are owner-side.

6. Basis and Discipline

— Candidate record INT-20261015-001 (FIT=HIGH / HIRE-VERIF=PENDING; resume self-reported 15 Oct via operator DM).

— Hiring ACT-20261008-002 (P1, due 2026-10-22, in-progress, 14 days overdue as of 5 Nov).

— Buying-cluster intelligence INT-20261010-002 (Bybit/TNG/First Digital/StraitsX/Deloitte posting evidence, LinkedIn jobs-guest API).

— Activation suite ART-20260908-002 family and DEC-20260908-001 (7-FTE model the salary sits inside).

— Resume facts are **[SELF-REPORTED]** and marked; no claim in this brief extends beyond the register. No defamation risk carried: the brief assesses fit, not the person.

— This document is an internal decision aid, not investment or legal advice.
